

**IN THE SPECIFICATION**

The specification has been filed without paragraph numbers or line numbers. The Examiner is respectfully requested to replace the paragraph beginning at page 3, first complete paragraph of the specification after DETAILED DESCRIPTION OF THE INVENTION, with the following paragraph to incorporate reference numeral --18-- after "oil tube" to conform the specification to the drawing Fig. 1. The Examiner may also refer to paragraph [0018] of US Patent Application Publication US 2007/0148017 (hereinafter, Feng) and support at paragraph [005], last sentence.

-- [0018]       The invention, comprising a balancing sieve tube, a drive and a pump, is placed in the underground oil reservoir. See FIG. 1. The drive consists of a stator and a reciprocating head located in the stator. The upper end of the stator frame 9 is connected to one end of a sieve tube 11 through a coupler 6 and the other end of the sieve tube 11 is connected to the oil tube via the pump. The lower end of the stator frame 9 is connected to the balancing sieve tube 3 through the coupler 6. The lower end of the balancing sieve tube 3 is connected to the end plug 2 and the end coupler 1. The oil tube 18 goes up to the surface.--
